**USE ONLY AS DIRECTED BY A PHYSICIAN**  
Directions for Preparation and Use

Your baby's health depends on carefully following these directions. Proper hygiene, handling, and storage are important when preparing infant formula. Failure to follow these directions could result in severe harm. Ask your baby's doctor if you need to use cooled, boiled water for mixing and if you need to boil (sterilize) bottles, nipples, and rings before use.

- Wash your hands, surfaces, and utensils. Pour desired amount of water into clean bottle (see mixing guide).
- Add 1 unpacked level scoop (9.4 g) to each 2 fl oz of water. Return dry scoop to can.
- Cap bottle; shake well; attach nipple. Once feeding begins, use within 1 hour or discard.

**Storage:** Once mixed, store bottles in refrigerator and feed to baby within 24 hours. Store unopened or opened container at room temperature; avoid extreme temperatures. Use opened can contents within 1 month.

**Warning:** Powdered infant formulas are not sterile and should not be fed to premature infants or infants who might have immune problems unless directed and supervised by your baby's doctor. Never use a microwave to warm formula. Serious burns can result.

**USE BY DATE ON BOTTOM OF CAN**

**MIXING GUIDE: DILUTION OF 20 CAL/FL OZ (SCOOP YIELDS 9.4 GRAMS POWDER)**

| Measure water | + | Add scoop(s) of UNPACKED LEVEL POWDER using enclosed scoop | = | Finished bottle (approx.) |
|---------------|---|--|---|---------------------------|
| 2 fl oz       |   | 1 scoop (9.4 g)  |   | 2 fl oz                   |
| 4 fl oz       |   | 2 scoops (18.8 g)  |   | 4 fl oz                   |
| 6 fl oz       |   | 3 scoops (28.2 g)  |   | 6 fl oz                   |

FOR MOST ACCURATE RESULTS EleCare® SHOULD BE WEIGHED ON A SCALE THAT READS IN GRAMS.

When mixed as directed, makes approximately 95 fl oz of formula at 20 Cal/fl oz.

Osmolality, prepared at 20 Cal/fl oz = 350 mOsm/kg water
