Talc

This product contains talc that is non-asbestiform, contains no asbestos fibers and is not classifiable as to its potential inhalation carcinogenicity under current GHS guidelines. However, the International Agency for Research on Cancer (IARC) found limited evidence of an association between ovarian cancer and the use of talc-based body powder for feminine hygiene including use of any talc-based body powder in the female genital area. IARC has used these data to classify talc-based powders used in the

female genital area as "possibly carcinogenic to humans" (Group 2B).
